

#PALEONTOLOGIE_THAILANDE: Découvertes des restes bien conservés d'une baleine datant de 3000 à 5000 ans

#PALEONTOLOGIE_THAILANDE: Découvertes des restes bien conservés d'une baleine datant de 3000 à 5000 ans Scientists in Thailand just discovered the stunningly well-preserved remains of a whale that lived between 3,000 and 5,000 years ago. Even more astounding, the skeleton was found seven miles from the shore, suggesting that ancient sea levels were higher than previously believed.
